

LOTUS BISCOFF

Brand guidelines

Identity, product truth and campaign production

Independent research edition

Prepared for Imprint. Based on public sources checked 20 September 2026.

This is not an official Lotus Bakeries brand manual. Verified evidence and proposed production rules are identified throughout.

SCOPE AND EVIDENCE

How to use this guide

Use this PDF as a detailed reference for Imprint's Biscoff test brand. It combines public brand evidence with practical directions for still-image campaigns. It does not replace the brand owner's master guidelines, market artwork or approval process.

Evidence label	Meaning
Verified	A fact or instruction stated by Lotus Bakeries or the identity designer. Its scope and source are retained.
Observed	A detail inspected in a public brand asset or the live website. This proves that use, not a universal rule.
Recommended	An original production rule proposed for this Imprint test. It may be changed by the brand owner.
Unconfirmed	A specification unavailable in the sources reviewed. Imprint must preserve the uncertainty rather than invent a value.

Scope

English-language reference for the global identity. Product details and packshots use the Great Britain consumer site unless stated otherwise. For Belgium, confirm Dutch or French pack artwork, local claims and current stock before production. No official audience demographics or account-performance data were supplied.

Reading order

Pages	Use
03-05	Brand foundations, naming and the current identity
06-09	Logo, colors, typography and composition
10-15	Product accuracy, claims and photography
16-18	Voice, copy and social formats
19-23	Campaign example, prompts and Imprint profile
24-25	Third-party use and release checks
26-27	Sources, asset credits and open specifications

Source priority: current owner-approved market assets; current SKU label; current official market site; corporate publications; identity-designer evidence; this guide's recommendations. A newer local pack can be more relevant than an older global campaign image.

Brand foundations

What the brand is built around

Biscoff has Belgian origins and dates to 1932. Jan Boone Sr. founded Lotus Bakeries. The brand's central sensory reference is a caramelised biscuit with a crisp bite. Its spread extends that biscuit taste into a different texture and set of eating occasions. [S1, S2, S3]

Working positioning for this campaign

The recognisable caramelised biscuit taste, enjoyed in another everyday moment. For the breakfast test, make the link between the familiar biscuit and the spread immediately visible. This is a proposed campaign position, not an official positioning statement.

Principle	Creative decision
Taste before abstraction	Show what the viewer will eat. A spread ridge on toast explains more than a vague promise about happiness.
Recognition before novelty	Retain the correct pack, product silhouette and brand assets. Put novelty in the setting or serving idea.
Everyday indulgence	Use believable portions, familiar breakfast food and an attainable kitchen setting. Avoid presenting the product as a health intervention.
Approachable energy	Favor direct language and inviting scenes. Keep the product visible when people appear.

Audience for the Imprint test

Adults who already enjoy the biscuits and have not yet tried the spread. Their question is practical: what would I put it on? Toast, breakfast preparation and a visible jar answer that question. This audience comes from the supplied campaign brief, not published Biscoff demographic research.

Sources: S1-S3; U1

Brand hierarchy and naming

Biscoff is the product brand, endorsed by Lotus. The contemporary identity gives Biscoff the leading role. Lotus Bakeries is the corporate company name. Keep those roles distinct. [S5, S6]

Context	Use
Campaign copy for this guide	Use Biscoff® at the first prominent reference. In headings and captions, name the actual product when clarity needs it. This is a working editorial convention for owner-authorized creative.
Product references	Write Biscoff biscuit, Biscoff spread smooth or Biscoff spread crunchy according to the selected local product name. Use the label as the naming authority.
Logo artwork	Place the complete approved artwork, including its Lotus endorsement and trademark detail. Do not rebuild the relationship by typing the two names separately.
Corporate attribution	Use Lotus Bakeries when referring to the company, corporate reports or brand ownership.
Foodservice or manufacturer use	Separate public trademark conditions apply. Read page 24 before treating these naming suggestions as permission.

Language choices

Use one locale per asset. The examples here use British English: biscuit, caramelised and flavour. American creative may use cookie, caramelized and flavor. Do not rewrite text inside photographed packaging to match caption spelling.

Avoid ambiguous shorthand

- Do not use Lotus alone as the consumer product name in the proposed campaign.
- Do not call an unrelated speculoos product Biscoff.
- Do not describe spread as coffee-flavoured because the brand is associated with coffee.
- Keep the product descriptor outside the logo; do not invent a new lockup.

Sources: S2-S6. Editorial conventions above are recommendations unless explicitly attributed.

Use the current identity

The 2025 annual report records a new contoured spread jar with biscuit-inspired embossing and a reoriented label. Its US debut was December 2025, with wider rollout in 2026. The report also records the move from Lotus to Biscoff biscuit engraving, starting in the US and India in late 2025 and rolling out globally in 2026. [S7, pp. 59-60]

Observed current references: Biscoff engraving and the contoured smooth-spread jar on the GB website. [A2, A3]

Do not blend generations

A campaign may legitimately encounter older stock. Select one approved reference set for its market and date, then preserve that set throughout. A new label on an old jar body is a fictional SKU. An old biscuit engraving beside new packaging may also be wrong for the intended market.

Before generation	Record
Pack identity	Market, language, variant, size and reference date
Physical form	Jar silhouette, lid, shoulder, base and embossing
Biscuit identity	Outline, face engraving and the visible pack illustration
Approval decision	Use current stock, an approved transition set or a deliberate historical reference

Sources: S7; S2-S4. Older BrandMe images in this guide document identity design, not current SKU artwork.

Logo use

Current reversed website lockup, reproduced as reference evidence from the official GB site. [A1]

BrandMe describes a curved wordmark with a biscuit reference in the dot of the i. These are designed letterforms, not effects to apply to an ordinary font. [S6]

Handling rules proposed for Imprint

- Use a supplied vector master for final placement. Preserve the artwork's proportions, internal spacing, curve and trademark symbol.
- Choose an approved positive or reversed asset for its background. Avoid automatic recoloring or adding an outline.
- Do not stretch, rotate, bevel, shadow or redraw the logo. Do not replace its biscuit-shaped detail with a dot.
- Keep the logo off busy food textures. Use an uncluttered image area or an approved solid-color field.
- Do not use a generative model to repair illegible logo lettering. Replace the affected artwork with a correct source asset.

Clear space and minimum size

The designer's public guideline montage depicts a letter-based clearance diagram. The full current master specification was not obtained. Do not infer a universal pixel minimum or print width from that reduced preview. Obtain the current master before release. [A7]

Production recommendation

For private test layouts only, reserve generous space around the entire lockup and verify legibility at actual phone size. This is a provisional composition check, not an official exclusion-zone specification.

Sources: S6; A1; A7

Color system

The live GB website stylesheet declares these primary color tokens. They are exact observed web values, not certified print colors. [S8]

			
Primary red	White	Light red	Dark red
#C61A27	#FFFFFF	#E60023	#7D0C15
198 / 26 / 39	255 / 255 / 255	230 / 0 / 35	125 / 12 / 21

Apply the hierarchy deliberately

Make the primary red and white the graphic foundation. Use the darker and lighter reds only when the composition benefits from them. Do not treat every CSS accent token as a separate packaging standard. Preserve food color with a neutral white balance instead of grading everything red.

Proposed support	Role
Warm paper #F7F1E8	Background for this reference document and optional quiet scene surfaces. This is an editorial choice, not a verified brand swatch.
Dark text #25211E	Long-form text in this document. Not a claim about Biscoff's brand palette.
Biscuit and spread browns	Take these from the approved product photograph. They vary with lighting and material; do not impose one invented universal caramel hex.

Reproduction and contrast

Work in sRGB for the proposed digital exports. White against #C61A27 has approximately 5.87:1 contrast; white against #E60023 is about 4.78:1. These calculations apply to flat opaque colors. Check text over real photography separately. W3C's normal-text reference is 4.5:1. [S9]

Pantone, CMYK recipes, ink coverage and substrate tolerances remain unconfirmed. A converter output is not a print standard.

Sources: S8-S9. Supporting colors and usage hierarchy are recommendations.

Typography

Unique
taste,
crunchy
like no
other!

Published BrandMe type specimen. Reproduced for identification, not supplied as a reusable font license. [A6]

The public specimen names the display face **Biscoff Bold**. A published guideline excerpt identifies **VAG Rounded LT Pro** as the supporting family. The current GB website assigns its CSS family Biscoff to headings and interactive text, and VAG Rounded LT Pro to body text. [A6, A7, S8]

Proposed type hierarchy

Role	Direction
Campaign headline	Use the licensed Biscoff display face when supplied. Prefer a short phrase and natural line breaks. Avoid all-caps paragraphs.
Supporting text	Use the approved supporting family and weight. Keep sentence case, open counters and a comfortable line height.
Fine print	Use a readable approved body face. Do not compress letters to force legal copy into an undersized space.
Prototype fallback	Use a neutral sans serif and mark the asset provisional. Arial in this PDF is document typography, not a replacement Biscoff brand font.

Do not download webfonts and assume desktop, embedding or advertising rights. Request the licensed font package. Do not artificially bend ordinary headline text to imitate the logo's curve.

Sources: S8; A6-A7. Final sizes and tracking depend on the approved layout, not a universal number invented here.

Composition and hierarchy

Build each image around one product action. A jar beside toast, a knife spreading or a biscuit beside coffee should be understandable before the caption is read.

1. Recognition

Give the pack enough size to identify the exact product.

2. Appetite

Show the food texture or serving action close to the pack.

3. One message

Leave a quiet area for a brief headline. Put detail in the caption.

Schematic for composition only. Jar reference: official GB smooth product page. Typeface and geometry are editorial examples. [A3]

Useful constraints for the test campaign

- Use one dominant product. Supporting biscuits should explain the spread's origin rather than compete with the jar.
- Start with outer margins near 6% of the canvas width. This is a working grid, not an official logo clear-space rule.
- Keep headlines to roughly two to seven words. If the pack is already large and legible, a second large logo may add clutter.
- Reserve text space in the original composition. Reframing a photograph is preferable to covering the food with a text panel.
- Design the feed and story crops separately. Preserve the same idea while moving objects to fit the format.

The original biscuit

Official website detail showing the current Biscoff face engraving. [A2]

The GB classic biscuit page describes a crunchy caramelised biscuit. Its listed allergens are wheat and soya. Cinnamon appears in the ingredient list. Those facts describe that product page and must not be generalized to every extension of the brand. [S2]

Visual checks for generated scenes

Part	Preserve
Shape	The elongated biscuit outline, rounded/scalloped perimeter and baked edge visible in the selected reference.
Face	The correct engraving for the chosen reference generation. Lettering must be pressed into the surface, not printed on top.
Surface	Fine baked pores and uneven natural color. Avoid a smooth plastic surface, sponge texture or a chocolate coating on the original biscuit.
Scale	Use the uploaded reference proportions. Never infer the biscuit's exact physical dimensions from a perspective image.
Break and crumbs	A dry crisp fracture with plausible small crumbs. If a biscuit breaks, its pieces should account for the original shape.

Keep flavor description grounded in caramelisation and texture. Do not imply that the original biscuit contains coffee or that every product is made in Belgium.

Sources: S2; A2. Rendering checks are recommendations based on the reference image.

Spread and packaging fidelity

Left: smooth 400 g. Right: crunchy 380 g. Current GB product-page packshots. [A3-A4]

Check	Smooth	Crunchy
Texture	Creamy, without the added biscuit-piece texture of crunchy.	Visible biscuit pieces are part of the variant.
GB reference size	400 g	380 g
Listed biscuit content	58%	66%
Generation risk	Accidental grainy or nut-butter texture.	Rendering the spread perfectly smooth.

Keep the entire SKU consistent

Preserve the jar body, lid color, label orientation, variant wording and weight from the same approved reference. Do not invent a front label from remembered brand elements. A clear jar must show plausible spread through the material, including contact near the glass and realistic reflections.

If a hand holds the jar, protect its dimensions and label readability during the edit. If the lid is off, show a credible rim and closure. Do not add a second lid, float the knife or put a thumb through the glass.

Sources: S3-S4, S10; A3-A4. Percentages and weights are specific to the cited GB pages.

Product claims and exclusions

Facts must stay attached to the selected SKU and market. The following is a claim-control sheet for campaign review, not replacement labeling or a complete nutrition specification.

Topic	What the evidence supports	Production rule
Vegan	The official FAQ identifies original biscuits and spread as vegan, with other products varying. [S10]	Confirm the local pack. Do not extend the claim to a whole range or a breakfast containing dairy.
Gluten and soya	The cited GB biscuit and spread pages identify wheat/gluten and soya. [S2-S4]	Reject gluten-free or soy-free copy for these references. Do not promise allergen safety from an image.
Palm oil	The cited GB ingredients include palm oil. [S2-S4]	Reject palm-oil-free claims for these products.
Health and nutrition	This guide establishes no approved health or reduced-sugar claim.	Avoid healthy breakfast, guilt-free, protein boost or nutritional superiority.
Origin	Belgian brand origins do not prove the manufacturing location of a particular pack. [S1, S7]	Use a local pack or approved claim sheet for country-of-manufacture copy.
Certification	The official FAQ points to the pack for certification confirmation. [S10]	Do not generate a halal, kosher or sustainability seal.
New packaging	The annual report says the bespoke jar changes packaging while the recipe stays the same. [S7]	Do not invent a reformulation story or call the spread itself new.

Record evidence for every factual claim

Save the exact wording, supporting source, market, SKU, date checked and approving person. If a claim is uncertain, leave it out of public copy until resolved. Describing visible toast or spread texture does not establish a nutritional benefit.

Sources: S1-S4, S7, S10. Claims can change; the current local label remains decisive.

Photography direction

Official breakfast-setting image. It provides a reference for product use and an inhabited kitchen. [A5]

What to carry into the Imprint test

Use a believable breakfast action, directional daylight and enough environmental detail to place the scene. The jar should belong in the scene rather than look pasted onto a generic kitchen photograph. Keep the food's caramel tones clear against a lighter surface.

Element	Recommended treatment
Light	A broad side window or similarly soft source. Keep contact shadows under the jar, plate and hand consistent.
Lens and perspective	Use a natural tabletop perspective or a deliberate overhead view. Avoid extreme wide-angle distortion of the jar.
Focus	Keep the important product detail sharp. Background softness should not make the label or serving action unreadable.
Color	Use warm food and a neutral-to-warm environment. Avoid orange casts in skin, gray spread or oversaturated red reflections.
Setting	An everyday kitchen, breakfast table or coffee setting with a small number of purposeful objects.

Sources: A5. The directions above are editorial recommendations, not camera specifications published by Lotus.

Food styling and texture

Official recipe-style serving image and biscuit-with-coffee reference. [A8-A9]

Spread should behave like spread

- Show a thick, spreadable consistency that follows the knife. Do not render it like maple syrup, melted chocolate or an elastic ribbon.
- Let toast texture remain visible around the spread. Use an amount that looks deliberate and edible rather than a mound added for scale.
- If a recipe calls for warmed spread, make that state explicit in the brief. Do not use a flowing topping to represent an unheated jar texture.
- Use crumbs sparingly and place them where the action could create them. Avoid evenly spaced decorative crumb patterns.

Make the serving internally consistent

The jar variant, the texture on the food and the caption must agree. Keep ingredient cues honest. A strawberry, coffee cup or milk jug can establish the scene, but it does not become an ingredient in the packaged spread.

Surface and material checks

Glass has thickness. Toast has pores and irregular edges. Metal reflects the surrounding scene. A ceramic plate needs a contact shadow. Use these checks to catch a plausible-looking image whose materials do not behave consistently.

Sources: A8-A9 are visual references. Styling rules are proposed for this test.

PRODUCTION RECOMMENDATIONS

People, places and props

People should make the eating occasion clear. They do not need to pose with the pack in every image. A hand spreading toast can carry the idea with less distraction than a full portrait.

Casting and behavior

- For this test brief, cast adults and use an ordinary breakfast action. This is a scope choice, not a published Biscoff age-targeting policy.
- Give hands a clear physical task. Verify finger count, grip, utensil contact and the weight of the object being held.
- Use natural expressions. Avoid theatrical surprise unless the campaign explicitly calls for that treatment.
- Maintain the same person, clothing and environment across related assets if they are meant to depict one breakfast.
- Use a consenting model or a fictional generated person. Do not introduce a real person's likeness or an implied endorsement by accident.

Props that earn their place

Useful in this brief	Avoid unless specifically briefed
Toast, a spreading knife, a simple plate and a mug	Competing branded products, unreadable newspaper logos or an invented retailer endorsement
A table, countertop or quiet linen surface	A luxury set that makes an everyday serving idea feel unattainable
A closed jar or an open jar with its lid accounted for	An open container beside an impossible amount of spilled spread
Small signs of breakfast preparation	Excessive clutter, abundant packaging used as decoration or unrelated seasonal cues

Keep cultural context deliberate

For a Belgian campaign, select local language, pack artwork and recognizable breakfast context together. Avoid combining English packaging, Dutch copy and a country-specific promotion without a clear reason. Broader regional casting and cultural direction should come from the local brief.

Voice and message hierarchy

BrandMe describes the identity as joyful and approachable. The current GB homepage uses the line "You gotta love Biscoff®". These references support an expressive, conversational direction; they do not make every slogan or tone choice an approved brand rule. [S6, S11]

For the breakfast campaign

Layer	Working message
Goal	Encourage biscuit fans to try Biscoff spread.
Main idea	The familiar biscuit taste can be part of a weekend breakfast.
Visible proof	The correct jar, recognizable biscuits and spread on toast.
Action	Try it on toast or save a serving idea. Use a retail CTA only with verified availability.

Writing rules proposed for Imprint

- Use familiar words for what the viewer can see and taste. Start with toast, spread, crunch or the breakfast action.
- Keep one main thought per headline. Explain the relationship between biscuit and spread in the caption when needed.
- Allow warmth and a little playfulness, but do not force puns into every asset.
- Prefer a concrete invitation to broad claims such as transform your mornings.
- Do not invent a new official tagline. Mark campaign headlines as draft copy until approved.
- Keep pricing, offers and availability out unless supplied. Never create urgency around a deadline that does not exist.

Caption shape

A useful working sequence is a short opening, one sentence explaining the serving idea and one clear action. Keep hashtags optional. There is no verified universal hashtag count, emoji policy or Biscoff posting formula in the sources reviewed.

Sources: S6, S11; U1. The sample campaign copy is original draft writing.

Copy examples

These examples belong to the proposed owner-authorized Imprint test. They are not quotations from a Biscoff campaign and are not approved third-party product names.

Use in a draft	Avoid	Reason
Your favourite biscuit taste. On toast.	A revolutionary breakfast experience.	Makes the serving idea clear.
Try Biscoff® spread on warm toast this weekend.	The healthy way to start your day.	Invites a use without inventing a health benefit.
A smooth start to Saturday.	Made with the finest coffee beans.	A light texture reference is plausible; the ingredient claim is not supported.
Biscuit crunch. Smooth spread.	The same crunch in every spoonful.	Keeps biscuit and smooth-spread textures distinct.
Save this for your next slow morning.	Only today. Get yours before it sells out.	Does not invent scarcity.

Caption draft

"Already a Biscoff® biscuit fan? Try Biscoff® spread on warm toast this weekend. Keep a jar on the breakfast table and make it your own."

Review note: this is ordinary serving inspiration. It does not establish a health claim, guarantee stock or imply that every breakfast ingredient is vegan.

Alt text draft

"A jar of Biscoff smooth spread beside toast on a white plate. A knife leaves a thick layer of spread across one slice."

Write alt text from the finished image. Mention the action and any essential on-image words. Do not copy a caption full of promotional language into the image description.

RECOMMENDED WORKING SPECIFICATIONS

Instagram production formats

The dimensions below are selected production targets for this PoC. They are not a complete list of Instagram's accepted formats or an official Biscoff standard. Preview the final file in the actual placement.

Story diagram reserves about 14% at the top, 21% at the bottom and 6% at each side as an internal starting margin. It is not a platform guarantee. Larger interface elements or ad placements may need more space.

Output	Working rule
Image export	sRGB JPEG for photographic assets; PNG when clean graphic edges justify the file size. Inspect after export, not only in the editor.
Feed	Use the 4:5 crop above for this campaign. Check profile-grid previews independently; do not assume they show the whole asset.
Story	Make a separate 9:16 layout. Keep the pack name, main action and headline clear of visible interface controls.
Text size	Start near 64-96 px for a short headline on a 1080 px-wide image. Adjust using a real phone preview, not the number alone.
PoC resolution	A roughly 1K model output is acceptable for testing. Do not claim a resized export contains extra native detail.
Captions and links	Keep caption text separate from the raster. Add any functioning Story link or sticker in the publishing app.

No universally optimal posting time is established here. The times on page 19 are test hypotheses, to be replaced with account evidence.

RECOMMENDATION BASED ON THE SUPPLIED BRIEF

Example campaign plan

Objective: help people who know the biscuits try the spread at breakfast.

Audience: adult biscuit fans who have not tried the spread.

Offer: a serving idea, with no invented discount or product launch.

Deliverables: three feed images and three Story images over four weeks.

Six assets, one progression

Asset	Creative purpose	Suggested slot
F1 / Feed	A breakfast table introduces the jar and toast.	Week 1, Saturday 9 AM
S1 / Story	Show one spread-on-toast action with a short invitation.	Week 1, Sunday 9 AM
F2 / Feed	Place a biscuit beside smooth spread to connect the familiar taste with the new use.	Week 2, Wednesday 4 PM
S2 / Story	A close-up makes the texture and serving idea clear.	Week 2, Saturday 9 AM
F3 / Feed	A tighter breakfast detail gives people an idea worth saving.	Week 3, Saturday 9 AM
S3 / Story	Return to the same breakfast setting and invite a first try.	Week 4, Friday 4 PM

What changes, what stays consistent

Vary framing, viewing distance and the action. Keep the jar variant, packaging generation, light direction, copy tone and overall breakfast setting consistent. Choose smooth for the main demonstration and do not quietly switch to crunchy between assets.

Evaluate the test

Before any live use, review product fidelity and whether a person unfamiliar with the spread understands the serving idea. For a live campaign, compare saves, profile visits or clicks with the account's own baseline. Image engagement alone cannot prove product trial.

Sources: U1. Four weeks comes from the example brief; the six assets follow the PoC deliverable count. Times are suggestions, not performance findings.

Feed briefs

F1 / The breakfast table

Visual. A softly lit kitchen table with toast, a plate and the correct smooth-spread jar. Frame close enough to recognize the jar without reading the caption. A hand may be reaching for the knife. Reserve one quiet area above the food.

Headline. Your favourite biscuit taste. On toast.

Caption. Already a Biscoff® biscuit fan? Try Biscoff® spread on warm toast this weekend.

Check. Jar and food share the same light, scale and surface. No unrelated packs in the background.

F2 / The biscuit-to-spread connection

Visual. A correct original biscuit and a knife carrying smooth spread, with the jar as the product anchor. Use a real tabletop arrangement. Avoid a magical morph or a biscuit turning into liquid.

Headline. Biscuit crunch. Smooth spread.

Caption. The caramelised biscuit taste you know, ready for your toast. Make room for Biscoff® spread at breakfast.

Check. Preserve the biscuit engraving and make the two textures visibly different.

F3 / The close-up worth saving

Visual. A close view of spread on toast with a partial but recognizable jar in the same scene. Show the knife mark, crisp toast edge and a few natural crumbs. Keep the serving attainable.

Headline. A smooth start to Saturday.

Caption. Warm toast, Biscoff® spread and a few minutes to enjoy it. Save this for your next slow morning.

Check. Smooth spread must not become runny syrup, chocolate or a chunky variant.

Production recommendation

All captions are drafts for the test campaign. Replace any asset whose pack details drift, even when the image is attractive. A successful mood does not excuse an incorrect product.

Story briefs

S1 / One action

Frame. Vertical close view of a knife spreading onto toast. Keep the jar in the central area with enough visible label to establish which product is being used.

On-image copy. Try it on toast.

Optional supporting line. Biscoff® spread, ready for breakfast.

Check. The hand, knife and food remain inside the useful viewing area after interface overlays.

S2 / Texture detail

Frame. A vertical food close-up that clearly shows a smooth ridge of spread. A whole biscuit can sit beside the plate as a reference to the familiar taste, without obscuring the toast.

On-image copy. Same biscuit taste. A different bite.

Action. Use a real interactive sticker only if a publishing operator adds it. Do not bake a fake working button into the image.

Check. Do not imply that smooth spread has the crunch of the original biscuit.

S3 / A reason to try it

Frame. Return to the campaign's breakfast table in a slightly wider crop. The jar and prepared toast remain the main subjects. Leave space for a short line above the central serving.

On-image copy. Breakfast plans for the weekend?

Supporting line. Make room for Biscoff® spread.

Action. If a verified local shopping destination is supplied, add a real link sticker during publishing. Otherwise keep the invitation focused on trying the serving idea.

Production recommendation

A Story image must work by itself. Do not assume a viewer has already seen the feed posts or will watch all three Story assets in order. Repeat the product cue where needed.

Generation and edit prompts

Attach the selected market product photographs to every generation involving the product. Text alone is not a reliable specification for a branded pack. Use the uploaded reference as the authority for all physical and printed details.

Scene prompt

Create a realistic 4:5 breakfast photograph for a Biscoff smooth-spread campaign. Use the attached approved jar reference exactly for the jar silhouette, red lid, label layout, variant text and pack weight. Show the jar beside a white plate with warm toast and a spreading knife on a pale kitchen table. Soft window light comes from the left. The spread is thick and smooth, with a natural knife ridge. Preserve the reference product proportions. Keep the jar label legible and leave a quiet upper area for a short headline. No added headline or separate logo in this generation.

Constraints to carry with the prompt

No invented brand text, mixed packaging generations, extra lids, warped labels, fake certification marks, competing product logos, impossible reflections, distorted fingers or syrup-like smooth spread. No implied health claim. Do not alter biscuit engraving. These constraints support review; they do not guarantee an accurate output.

Focused correction prompt

Replace only the incorrect jar with the attached approved smooth-spread reference. Match its scale, perspective, contact shadow and left-side window lighting to the existing scene. Preserve the toast, hand, knife, camera angle and background. Keep the jar artwork readable. Do not change the variant, weight or label text.

Review between stages

- Approve composition and human anatomy before spending effort on small packaging corrections.
- Compare the product at full resolution with its source. If lettering still fails, composite the approved asset rather than repeatedly inventing it.
- Add final brand typography and approved logos in a controlled layout step wherever the workflow permits it.
- Retain a version before each edit. After every edit, re-check nearby product details and the final crop.

Sources: U1 supplies the image-generation context. These are original production prompts, not model-specific capability claims.

FACTS AND RECOMMENDATIONS KEPT SEPARATE

Imprint extraction profile

The brand review should preserve these distinctions. Do not flatten every sentence in the PDF into a brand-owner rule.

Field	Value to extract	Evidence status
brand.name	Biscoff; endorsed by Lotus	Verified / S5-S6
company.name	Lotus Bakeries	Verified / S1
identity.red	sRGB #C61A27	Observed website token / S8
identity.white	sRGB #FFFFFF	Observed website token / S8
type.display	Biscoff Bold; CSS family Biscoff	Public specimen + website / A6, S8
type.support	VAG Rounded LT Pro	Public excerpt + website / A7, S8
product.primary	Smooth spread, 400 g GB reference	Verified for that market / S3
product.secondary	Original biscuit, 250 g GB pack	Verified for that market / S2
voice	Conversational, appetizing, direct	Recommended for this test
photography	Believable breakfast use, soft directional daylight	Recommended from references
campaign.audience	Adult biscuit fans new to the spread	User brief + proposed adult scope
campaign.outputs	Three feed and three Story images	User PoC context
claims.blocked	Unverified health, origin, certification or availability claims	Proposed production control
identity.unconfirmed	Print colors, complete clear-space/minimum-size rules, licensed font package	Needs owner-supplied assets

Retain the source URL, date and market alongside the values. A public website token is not a print color approval. A campaign-specific audience is not a global brand demographic.

Third-party brand use

Lotus publishes worldwide conditions for eligible foodservice operators and dessert manufacturers. Buying ingredients alone does not grant unrestricted branding rights. The linked policy controls; the summary below is intentionally brief. [S5]

Foodservice operators

Use genuine ingredients. Products must be prepared at the point of sale and sold within 48 hours. Refer to Biscoff® with the ingredient named; do not make it the product name or use wordplay. Menu logos are prohibited. Product photographs must reflect the actual serving or ingredient amount. Do not alter the biscuit, use illustrations or product renders, or edit brand assets into the photograph.

Dessert manufacturers

The published scope covers ambient or chilled desserts with a maximum 10-day shelf life. Genuine ingredients are required. Permitted packaging references are secondary and on the back, with the ingredient named. Logos, brand trade dress and biscuit/spread visuals on packaging are excluded.

For either category, use Biscoff® rather than Lotus or Lotus Biscoff. Wider asset use and co-branding require discussion with the local Lotus team. Recheck the current policy, which can change.

Sources: S5. This page summarizes public brand conditions, not a license or legal opinion.

How this affects the Imprint test

The campaign and generation directions in this guide describe an internal brand-owner-style test. They do not grant a café or independent food manufacturer permission to publish generated Biscoff product imagery. If the eventual account is a third-party business, classify its use before applying pages 19-22.

Official consumer campaigns and brand-authorized partner creative can have permissions that a third party does not. Do not infer permission from seeing a logo or collaboration online. Record supplied rights and approved assets with the project.

PRODUCTION CHECKLIST

Review before release

Check the exported file against the approved references. Review at full resolution, then at realistic phone size. A single incorrect product detail is enough to send an image back for correction.

Review	Pass condition
01 / Market and SKU	Correct country, language, variant, pack weight and packaging generation across image and caption.
02 / Logo and type	Approved artwork is intact. No invented lettering, lost trademark detail or substituted display font presented as final.
03 / Product physics	Jar, lid, biscuit, spread, utensils and hands have credible shape, scale and contact.
04 / Food consistency	Smooth/crunchy choice agrees with the texture. Ingredient props do not imply unsupported contents or claims.
05 / Color	Correct digital red when used as a flat field. Natural food and skin colors. No automatic print conversion treated as approval.
06 / Message	One understandable serving idea. Copy and pictured action agree. No invented offer, endorsement or product launch.
07 / Claims and rights	Every factual claim has a market-specific source. Brand, image, font and model permissions match the intended use.
08 / Placement	Feed and Story crops are reviewed separately. Labels, words and actions survive actual interface overlays.
09 / Delivery	Files open cleanly. Captions and alt text are included separately. Final version and approval date are identifiable.

Suggested handoff

Deliver the six final images, a caption and alt-text sheet, the selected product references and the approved brief. Suggested names: BISCOFF_GB_BREAKFAST_F01_FEED_1080x1350_v01.jpg and BISCOFF_GB_BREAKFAST_S01_STORY_1080x1920_v01.jpg. Shorten names as needed without losing variant or version tracking.

Sources and verification

Links are clickable. Public sources establish only the facts and examples attributed to them. Production recommendations in this document are original working guidance.

S1 [Biscoff GB / About us](#)

Brand origins and founder. General corporate prose is not treated as a SKU claim sheet.

S2 [GB / Classic biscuit 250 g](#)

Product description, ingredients, allergens and pack reference.

S3 [GB / Smooth spread 400 g](#)

Variant, weight, 58% biscuit content and current packshot.

S4 [GB / Crunchy spread 380 g](#)

Variant, weight, 66% biscuit content and current packshot.

S5 [Biscoff / Trademark guidelines](#)

Public conditions for foodservice and eligible dessert manufacturers. See page 24.

S6 [BrandMe / Biscoff identity case study](#)

First-party design rationale and public visual specimens.

S7 [Lotus Bakeries / Annual report 2025](#)

Printed pages 59-60: jar and engraving transition. Downloaded and checked.

S8 [Biscoff GB / Website stylesheet](#)

Observed live CSS: primary color tokens and semantic font-family assignments. Asset URL may change.

S9 [W3C / Understanding contrast minimum](#)

Text contrast reference. Calculations in this guide use opaque sRGB colors.

S10 [Biscoff GB / FAQ](#)

Variant texture, vegan scope and packaging confirmation for certifications.

S11 [Biscoff GB / Homepage](#)

Current campaign line, logo and product imagery.

Asset credits and open items

Product and campaign images belong to their respective rights holders. Reproduction here documents the researched identity and products. It does not create an asset license for advertising reuse.

Still required for an official production manual

- Current owner-issued logo masters with full clear-space and minimum-size specifications.
- Licensed font files and embedding or production rights.
- Approved print-color references and substrate-specific reproduction standards.
- The exact local SKU assets, claim sheet and packaging transition decision.
- Any local campaign, partner-use or media-placement requirements.

Brief provenance

U1: Imprint thread c26d3430-a33c-4201-89a8-0c5821586ab2. It establishes Biscoff as the test case, the biscuit-to-spread breakfast example and six still-image campaign outputs. It is project context, not evidence of Lotus Bakeries approval.

This document was assembled from the listed public sources and the supplied project context. No confidential Lotus brand book, official audience research or Instagram account analytics were available.
